

CrystalWave® PLUS

CrystalWave® PLUS is a line of food storage containers that values portability, portion control and provide the convenience of splatter-free reheating in the microwave

Features and Benefits

- **Toggle valve:** allows steam to escape while reheating. The polished indent on the valve makes it easy to know where to press on the valve to open it.
- **Seal:** has a large tab, which makes it easy to open even when full.
- **Rim on the seal:** allows safely stacking in the fridge.
- **Handles:** ensure safe and easy hold of the product especially when hot.
- **Color Control:** on the inside of the container helps minimize staining from ingredients such as tomato or curry.
- **Nestable:** containers can be stored together empty, to save space in cupboards and drawers.

Use & Care

- To close: place the seal on the container and use thumbs to push down along the edge until it snaps closed.
- Always ensure the valve is open before placing in microwave for reheating.
- Reheat at 70% power for 1 minute and 30 seconds up to 2 minutes and 30 seconds. If reheating in the microwave for longer than this, check food halfway and stir to ensure even heat distribution.
- After reheating, always open seal away from face.
- Always rinse product in cold water after use to prevent strong smells or staining.
- All parts of CrystalWave containers are dishwasher safe and the valve can be removed for cleaning.
- Always ensure the valve is closed when storing leftovers in the fridge.
- It's recommended to use plastic utensils to avoid scratching the inside of the container.
- When filled with food, always transport in upright position.
- Although the product features handles for safe handling, it's recommended to use oven gloves when removing from microwave.

Demonstration Ideas and Tips:

- The seal prevents splatters during microwave reheating: Place the valve in open position before reheating and/or close the valve to maintain freshness in the refrigerator.
- CrystalWave® PLUS offers a great solution to take a homemade dish or soup on the go. It can also be used straight from fridge to microwave to table, saving valuable time.
- The PLUS in the name of the product relates to the Color Control coating.
- Share visual and relatable phrases in product demonstrations:
 - o Great for lunch, at school, at the gym or at the office; take your favorite meal with you in a container that protects the food and your bag.
 - o Hot food for latecomers or plan-aheads! Perfect for anyone arriving home late from school or work, or planning ahead for those busy times. A prepared meal can be waiting for them in the refrigerator, ready to reheat and enjoy.
 - o Let food cool down before applying the seal and closing the valve to refrigerate or transport.
 - o Take CrystalWave containers with you when dining out, so you have a reusable alternative for taking leftovers home.
